PROJECT SHOWCASE / FRONT-END DEVELOPMENT

Kuber Vegetarian Hotel

A modern, responsive restaurant website built from scratch in 3 weeks

HTML5 • CSS3 • JavaScript ES6+

LIVE DEMO · kuberpureveg.netlify.app

Project Overview & Inspiration

THE IDEA

A polished online presence for a local vegetarian restaurant.

THE BUILD

Designed and developed from scratch over three weeks.

THE PURPOSE

Apply front-end skills to a practical, real-world use case.

CURRENT STATUS

Deployed and accessible online through Netlify.

Stack: HTML5 / CSS3 / JavaScript ES6+ • No ready-made website template

Inspiration → interface concept → implementation → live deployment

Design Philosophy & Visual Identity

“Old money rusty”

Heritage-inspired warmth,
elegance and modern usability.

EARTHY OLIVE
#3B3B1A

SOFT SAGE
#AEC8A4

RUSTIC BRONZE
#8A784E

WARM CREAM
#E7EFC7

Design principle: premium feel without sacrificing clarity, contrast or ease of use.

Five Key Features

01 THEME

Dark / light mode
Preference saved in browser

02 RESPONSIVE

Layouts for desktop,
tablet and mobile

03 MENU DISCOVERY

Category filters and search
for 40+ dishes

04 WHATSAPP ORDERING

Order flow opens a
pre-filled message

05 VISUAL EXPERIENCE

Gallery lightbox,
carousel and animations

Every feature was implemented as part of the custom front-end build.

Feature Deep Dive | Theme & Responsiveness

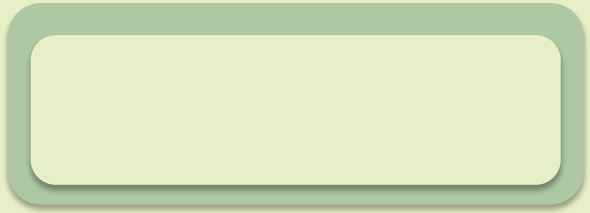

DARK / LIGHT MODE

- Theme colours managed through CSS variables
- Toggle updates the interface without a reload
- Preference persists with localStorage

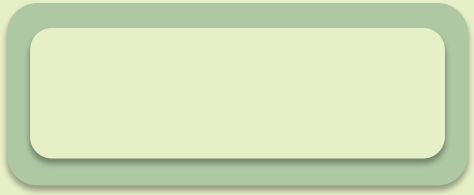

Benefit: a consistent, user-controlled experience.

RESPONSIVE LAYOUT

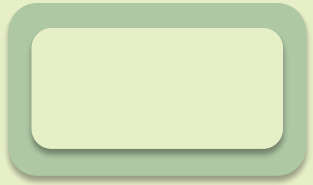

- Desktop: full navigation and multi-column cards
- Mobile: compact hamburger navigation
- Cards stack for narrow screens
- Media queries adapt spacing and typography

DESKTOP · 3 COLUMNS

TABLET · FLEXIBLE

MOBILE · 1 COLUMN

One site.
Many screens.

Feature Deep Dive | Menu & WhatsApp Orders

MENU FILTERING & SEARCH

- 40+ dishes organised by category
- Filter: starters, main course, desserts, drinks and street food
- Search by dish name or ingredients
- JavaScript filters the data and updates the menu

WHATSAPP ORDER FLOW

1. Choose “Order Now”
2. Enter customer details in the modal
3. Review the pre-filled message
4. Continue to WhatsApp to send it

A simple bridge between the website and restaurant.

BROWSE → FILTER → SELECT → CONFIRM DETAILS → WHATSAPP

Website Architecture & Main Sections

KUBER WEBSITE · SPA-STYLE NAVIGATION

HOME

Typing effect
Gallery & reviews

MENU

Dish cards
Search & filters

ABOUT

Story, mission
& values

CONTACT

Form & location
map embed

SERVICES

Catering, delivery
& special requests

NAVIGATION

Dynamic section changes create an app-like feel.

IMPORTANT DISTINCTION

Static front end; no persistent order database or admin backend.

Technical Implementation | HTML, CSS & JavaScript

index.html

Semantic structure
Forms and page sections
Accessible content

styles.css

CSS variables and themes
Flexbox / Grid
Breakpoints and animations

scripts.js

DOM and event handling
Menu filtering and rendering
Gallery, theme and order flow

EXAMPLE / FILTER THE MENU

```
const results = dishes.filter(dish =>
  dish.name.toLowerCase().includes(query) &&
  (category === 'all' || dish.category === category)
);
```

CORE FUNCTIONS

navigateTo(page)
renderMenu(items)
setupMenuFilters()
setupGalleryLightbox()

No major framework: the core experience is built with browser-native technologies.

Gallery, Animations & Form Handling

GALLERY LIGHTBOX

- Click to enlarge an image
- Navigate with arrows
- Keyboard support: arrows / Escape
- Touch-friendly browsing

MOTION & REVIEWS

- Fade-in menu cards
- Hover feedback on interactive items
- Customer review carousel
- Swipe support on mobile

FORM VALIDATION

- Check required fields
- Validate basic input formats
- Show helpful error messages
- Guide users toward WhatsApp

IMAGE

MENU CARD

FORM

Small interaction details make a site feel considered—not just decorated.

Challenges Overcome & Problem-Solving

RESPONSIVE DESIGN

Challenge: layouts break at narrow widths.
Approach: mobile-first CSS and breakpoint testing.

MENU FILTERING

Challenge: search and categories must work together.
Approach: combine array filter/includes logic.

THEME MANAGEMENT

Challenge: many components need consistent colours.
Approach: centralise colours in CSS variables.

WHATSAPP LINK

Challenge: safely pass order details in a URL.
Approach: encode message text before building the link.

LEARNING: research → test → debug → refine

DEMO CHECKLIST

1 Home animation and gallery 2 Menu filter + search
3 Dark / light toggle 4 Mobile layout 5 WhatsApp order flow

Summary, Learnings & Future Vision

WHAT I BUILT

- Custom restaurant website
- Five main sections
- Responsive interface
- Interactive front-end features

WHAT I LEARNED

- Organising a real project
- Debugging and iteration
- Mobile-first thinking
- Git and deployment workflow

WHAT COMES NEXT

- Backend order storage
- Admin menu dashboard
- Payment integration
- Reservations & languages

FUTURE ROADMAP

01 **Backend** → 02 **Admin panel** → 03 **Payments** → 04 **Reservations**

“This is more than a design exercise: it is a practical front-end solution that can grow.”
